

Ahmed Sobhi Hassan

Bug Hunter | Junior Penetration Tester

✉ ahmedelshabasy30@gmail.com ☎ +201005728536 🌐 Ahmed-Elshabasy

PROFILE

I'm a Computer Science student at the Faculty of Science, with a good background in software development and web technologies. Transitioning my focus into Cybersecurity, specifically web application penetration testing and bug hunting. I actively sharpen my hands-on hacking skills by solving real-world labs on PortSwigger Web Security Academy and TryHackMe, combining my understanding of code logic with attacker methodologies to find security flaws. Looking for an entry-level or internship opportunity I can identify vulnerabilities ethically and help secure applications.

EDUCATION

Bachelor of Science in Computer Science & Statistics

09/2023 – 06/2027 | Alexandria, Egypt

Faculty of Science, Alexandria University

Focuses on foundational computing, encompassing Networks, OS, Advanced OOP, and Algorithms. Actively leverages this knowledge of system architecture and web logic to effectively analyze applications and hunt for vulnerabilities.

PRACTICAL TRAINING

• PortSwigger Web Security Academy

02/2025 – 08/2026

Spent significant time solving real-world web security challenges. Factually tested and exploited flaws from server-side bugs to client-side vulnerabilities, gaining solid experience in bypassing web defenses, breaking logic workflows, and seeing how web applications fail under pressure.

• TryHackMe – Cyber Labs & CTF Challenges

Active on the platform solving practical rooms and CTF setups. Applied systematic recon, mapped out networks, and practiced system exploitation. This hands-on practice helped me develop an attacker's mindset, understand system privileges, and get comfortable working in both Linux and Windows environments.

COURSES

Red Teaming, Ethical Hacking, Penetration Testing, Bug Hunting, cracking software, Dark web (120 Hrs) Udemy

02/2025 – 01/2026

I Finished a comprehensive, deep-dive course covering ethical hacking from the ground up. Gained insights into Red Teaming concepts, Bug Hunting methodologies, application cracking analysis, and the operational mechanics of the deep/dark web for threat intelligence.

Fundamentals of Penetration Testing and Prepare for eJPTv2 (50 Hrs) Udemy

01/2026 – 07/2026

Completed an intensive training path focused on practical penetration testing methodologies. Covered network sniffing, vulnerability assessment, web application attacks, and systemic exploitation, mirroring the syllabus of the eLearnSecurity Junior Penetration Tester certification.

SKILLS

Web Application Penetration Testing & Bug Hunting (Technical Skills):

- **Vulnerability Assessment:** Proficient in mapping and exploiting OWASP Top 10 flaws, including SQL Injection (SQLi), Cross-Site Scripting (XSS), and CSRF.
- **Authentication & Logic Flaws:** Skilled in bypassing broken authentication mechanisms and uncovering business logic vulnerabilities.
- **Security Tooling & Automation:** Advanced usage of Burp Suite for manual testing alongside scanners like Nmap and SQLMap; proficient in using Python to automate recon workflows and script custom exploits.
- **Source Code Realization:** Utilizing software development foundations to analyze code behavior, understand developer logic, and spot implementation gaps.
- **Soft Skills:**
 - Cross-functional Team Collaboration - Technical Writing & Reporting - Stakeholder Communication
 - Time Management - Adaptability - Work Under Pressure - Ethical Judgement - Integrity
 - Attention to Detail - Active Listening - Continuous Learning - Curiosity
